Maple Valley, WA – July 17, 2019.

Power-Tech, makers of Eagle Fiber Laser, earns the 2019 Forbes Diamond Award; an award given to the companies in their region who not only show exceptional financial growth and financial strength over the past three years, but also excellent human resource assets. Only a few of the 3500 companies considered were awarded the coveted Forbes Diamond Award for 2019.

Why did Eagle Laser win? Over the past 3 years, Eagle showed high revenue growth of 40-50% per year, strong investments into new production halls, staff, and R&D, and strong overall financial strength shown by credit rating, paying of vendors, and cash Flow.

“We are proud but not surprised that Power-Tech/Eagle Laser earned this honor,” said Chip Burnham, co-founder of Fairmont Machinery the North American master distributor for Eagle. “Eagle is an amazing, dynamic company filled with passionate people focused solely on making the best fiber laser machine tools in the world, and the world is taking notice.”

Forbes used the Bisnode Polska intelligence system collected data from 3500 companies in the region of Poland and selected those with high growth, excellent credit, strong cash flow, and return on equity. Then, the renown Swiss Method was applied, where the companies were evaluated not only by their financial strength but also their investments in R&D, facilities, and human resources so that companies investing heavily receive credit for their forward-looking approach.

Brian Kent, also a co-founder of Fairmont Machinery, said, “Eagle’s investment in R&D, production, and human capital has clearly paid off. The iNspire Series of machines hit 14,000 ipm, 6g acceleration, and up to 15kW laser power resulting in the fastest part cycle times. You don’t get to this level of performance without a dedicated, talented team and a tremendous organization.”
